(54) Title: REAGENT CONTAINER FOR ANALYTICAL ROTOR
--

The diagram is a cross-sectional view of a reagent container assembly. A horizontal rotor body (2) is shown. Inside the rotor body, there is a chamber (8) containing a sealed container (6). A post (58) is positioned within the chamber (8). The post (58) is connected to a means for releasing a liquid (54) which is proximate to the receptacle (60). The rotor body (2) is shown in cross-section with various internal components labeled: 56 (top surface), 54 (release means), 52 (internal structure), 58 (post), 4 (rotor body), 57 (seal/stop), 6 (sealed container), and 58 (post). The assembly is mounted on a base (58).

(57) Abstract
---------------

An analytical rotor (2) which comprises a receptacle (60) for receiving a post (58) on a centrifuge and means in the rotor body (2) proximate to the receptacle (60) for releasing a liquid in response to mounting the rotor (2) in the centrifuge is disclosed. The means for releasing the liquid is preferably a sealed container (6) shiftably positioned in a chamber (8) proximate the receptacle (60).

## (57) Abstract

An analytical rotor (2) which comprises a receptacle (60) for receiving a post (58) on a centrifuge and means in the rotor body (2) proximate to the receptacle (60) for releasing a liquid in response to mounting the rotor (2) in the centrifuge is disclosed. The means for releasing the liquid is preferably a sealed container (6) shiftably positioned in a chamber (8) proximate the receptacle (60).

<p>(54) Title: METER CRADLE WITH WIRELESS COMMUNICATION PORT</p> <p>(57) Abstract</p> <p>A cradle apparatus (18 or 42) includes a wireless interface (20) with a meter (12), mounted to the cradle apparatus (18, 42) and the meter (12) transmits signal-transporting radiation to the wireless interface when the meter (12) is removably mounted to the cradle (18, 42). The wireless interface (20) of the cradle (18, 42) also supplies visible radiation to the meter (12) mounted to the cradle (18, 42), for illuminating a display (14) of the meter (12). The cradle (18) includes a pocket-like constraint (22) for constraining the meter (12) in a position in which a transmitter (40) of the meter is aligned with a receiver of the cradle's wireless interface (20). The cradle (42) can have a clasp-like shape, so that the cradle (42) can be clasped onto the meter (12) in a position in which a transmitter of the meter (12) is aligned with a receiver of the cradle (42).</p>
